Blockchain goes to CERN

Blockchain, the recent joint venture of **Athens Technology Center** (ATC) and **Vidavo**, two Greek software development and telemedicine leaders, participates in the trade mission visiting CERN in Geneva. This visit is organized by the Region of Central Macedonia in cooperation with Thessaloniki's ICT Business Park (Technopolis) and the support of the Federation of Industries of Northern Greece (SBSE) and the Greek Exporters Association (SEVE).

The mission aims primarily to develop commercial relations between Greek companies and CERN and to enlist the participating companies as certified suppliers for CERN. In this context, representatives of Blockchain are going to meet with CERN executives to present the company's experience in developing custom software solutions, focusing on the fields of big data analytics and blockchain technologies, as well as consulting and training services for ICT projects, among others.

Blockchain is a joint venture of Athens Technology Center (ATC) and Vidavo, two Greek software development and telemedicine leaders, operating as a full-service software development company. Blockchain exploits modern design principles, along with the latest blockchain, cloud, mobile and desktop technologies to deliver software of best-in-class performance at affordable prices.
